1. GHz refers to internal clock speed of the processor. Other factors besides clock speed may impact system and application performance.

2. Intel's numbering is not a measurement of higher performance. Dual/Quad/Triple Core is designed to improve performance of certain software products. Not all customers or software applications will necessarily benefit from use of this technology. 64-bit computing on Intel architecture requires a computersystem with a processor, chipset, BIOS, operating system, device drivers and applications enabled for Intel® 64 architecture. Processors will not operate (including 32-bit operation) without Intel 64 architecture enabled BIOS. Performance will vary depending on your hardware and software configurations. See [www.intel.com/infor/em64t](http://www.intel.com/infor/em64t) for more information.

3. This system may require upgraded and/or separately purchased hardware and/or a DVD drive to install the Windows 7 software and take full advantage of Windows 7 functionality. See <http://www.microsoft.com/windows/windows7/> for details.

4. High definition (HD) content is required to view HD images.

5. Dual Channel is only supported when the system is configured with DDR2 symmetric memory (i.e. 2 x 512).

6. For hard drives, GB = 1 billion bytes. Actual formatted capacity is less. Up to 12GB of system disk is reserved for system recovery software.

7. Internet access required and sold separately.

8. Wireless access point and internet access required and sold separately. Availability of public wireless access points limited.

9. The specifications for the 802.11n WLAN are draft specifications and are not final. If the final specifications differ from the draft specifications, it may affect the ability of the notebook to communicate with other 802.11n WLAN devices.

10. Mini/Reduced flash memory cards require separately purchased adapter.
